

## Full Stack Web Developer

Contractor Position, 3-month initial term

*360 Med Care is an innovative Australian company operating in the medical device, health care, and biotechnology sector specialising in total joint arthroplasty. We are real people, combining knowledge and technology to deliver positive patient outcomes.*

We are looking for a passionate full stack web developer to work in the orthopaedic industry. You will have a natural interest in problem solving, be highly motivated and organised to support our software development team.

This role is suited for a university educated or industry certified professional who is hungry for challenge, change and adaptation. We are looking for someone with the ability to manage and prioritise requests, with a strong drive to innovate with cutting edge technologies. The individual must be able to connect with internal and external stakeholders. There is a possibility of contract extension past the initial 3-month period for the right candidate.

### Requirements:

- Available for onsite work in Pymble, NSW once COVID restrictions lift
- Strong coding standards and software architecture understanding
- Ability to work within tight project deadlines and prioritise tasks

### Responsibilities

- Develop, and debug web applications, working closely with engineers and product advocates supplying wireframes, as well as an international team of developers.
- Specify design and expected database interaction for new features based on customer and internal user need
- Implement automatic testing and maintenance procedures, as well as protocols for manual testing required for feature release
- Manage and organise User Acceptance Testing on an agile/bi-weekly sprint basis

- Interface with a remotely based web development team and coordinate regular releases of new web features
- Work with AWS infrastructure on regular web app deployments
- Provide high level support to field users as required

**Ideal experience:**

- .Net experience preferred
- Familiarity with Agile Frameworks
- Technical Project Management Skills
- Understanding of (or prior work experience in) a heavily regulated environment, involving Quality Management Systems.

**Nice to have skills:**

- Experience in medical science or biomedical engineering
- Software/web app development using C# .Net frameworks
- Experience with SQL databases, stored procedures and queries
- Angular / React experience
- Cloud infrastructure services such as AWS
- Product Management Skills

**Key attributes:**

- Keen eye for polish, detail and performance
- A passion for design and innovative ideas
- A team player looking to collaborate and share
- Ambitious use and embrace of new technologies
- Great communication skills
- Ability to take initiative and drive ownership and completion of tasks

This role reports to the Software Development Manager. The role comes with an attractive compensation package and is a position within a fun, young team. You will drive clinically beneficial insights that will impact real surgical patients.

If you feel you are up for a great challenge, please send your resume to **hr@360med.care**
